# Incitetales

Northeast India's first community-powered travel intelligence platform — where traveller stories directly improve AI-generated itineraries. Built from Guwahati by Indranuj.

## WHAT INCITETALES IS

Northeast India's first AI-powered travel intelligence platform built on verified local knowledge. Core product: an AI itinerary builder anchored in a structured destination database built from personal field experience across Assam, Arunachal Pradesh, Meghalaya, Nagaland, Mizoram, and Sikkim.

**Revenue model — in order of activation:**

**1. Booking commission** — Traveller generates an itinerary, selects experiences (stays, guides, activities, transport). Incitetales books everything on their behalf and keeps a small commission per booking. Operators keep the majority. This is the primary revenue engine once operator network is live.

**2. Operator monthly subscription** — Homestays, taxi operators, local guides, and experience providers pay a fixed monthly subscription to be listed, verified, and featured within Incitetales itineraries. Subscription-only — no per-booking deduction on top. Operators who earn more from Incitetales bookings move to higher tiers.

**3. Newsletter sponsorship** — The Incitetales weekly newsletter reaches a pre-qualified Northeast India travel audience. Regional tourism brands, hospitality businesses, and travel companies sponsor issues at fixed rates. Editorial independence maintained.

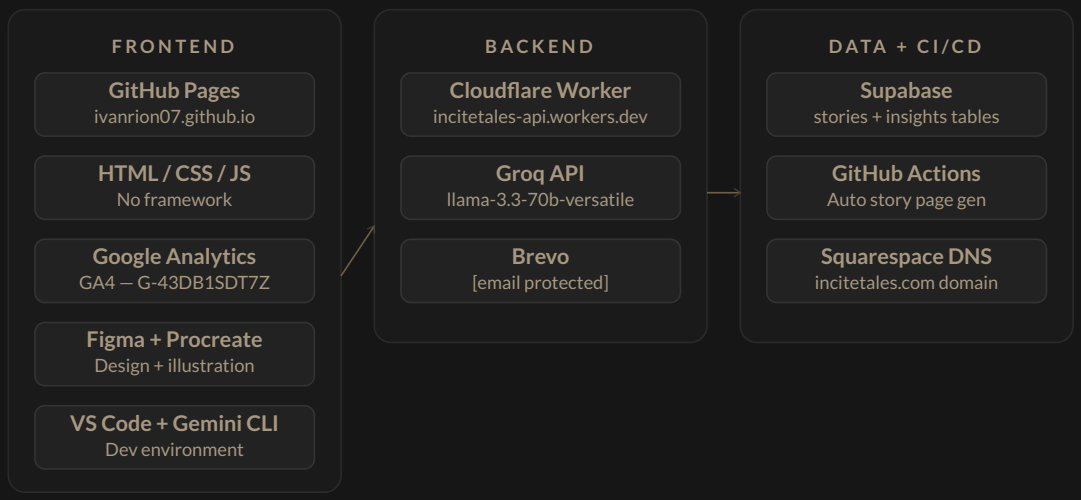
**4. NE India knowledge API (Phase 4)** — As the verified destination database grows across all eight Northeast states, the structured intelligence becomes licensable to travel companies, OTAs, and state tourism departments who need accurate NE India data they cannot build themselves.

WHAT MAKES IT DIFFERENT

| VS | COMPETITOR | INCITETALES ADVANTAGE |
|---|---|---|
| Government NE tourism sites | Static brochures, no soul | Living platform — stories grow the AI |
| Travel blogs | One person, frozen in time | Community-sourced, multi-voice, verified |
| MakeMyTrip / Thrillophilia | Sell packages from Delhi | Built from Guwahati — Arunachal permit intelligence no OTA offers |
| Other Assam-made platforms | Operator sites dressed as content | Content-first, trust before booking, InsightEngine flywheel |

# Tech Stack

FULL STACK OVERVIEW



# Version History

MAR 2026 — CURRENT

### v3.0 — InsightEngine + Story Pipeline v3.0

InsightEngine v3.0 live — Cloudflare Worker reads Supabase insights table, fuzzy-matches destination, injects verified facts into Groq system prompt. Share Your Story pipeline fully working. GitHub Actions auto-generates

story pages. Stories listing page with Editorial + Field tabs. GA4 installed across all pages. Supabase stories + insights tables live. Homepage redesigned with carousel.

MAR 2026

### v2.0 — Itinerary Builder + Email v2.0

Cloudflare Worker deployed with Groq API integration (llama-3.3-70b). Brevo email delivery wired to [email protected]. 5-step form flow on itinerary-builder.html. Arunachal permit intelligence added as key differentiator. Covers: Assam, Meghalaya, Mizoram, Arunachal (Dibang Valley, Kameng, Mechuka, Lohit), Goa, Darjeeling, Sikkim.

MAR 2026

### v1.0 — Site launch + First Story v1.0

index.html live on GitHub Pages. maguri-beel.html — first story page (Maguri Beel, Assam). Squarespace domain pointing to GitHub Pages. Basic nav, footer, brand identity established.

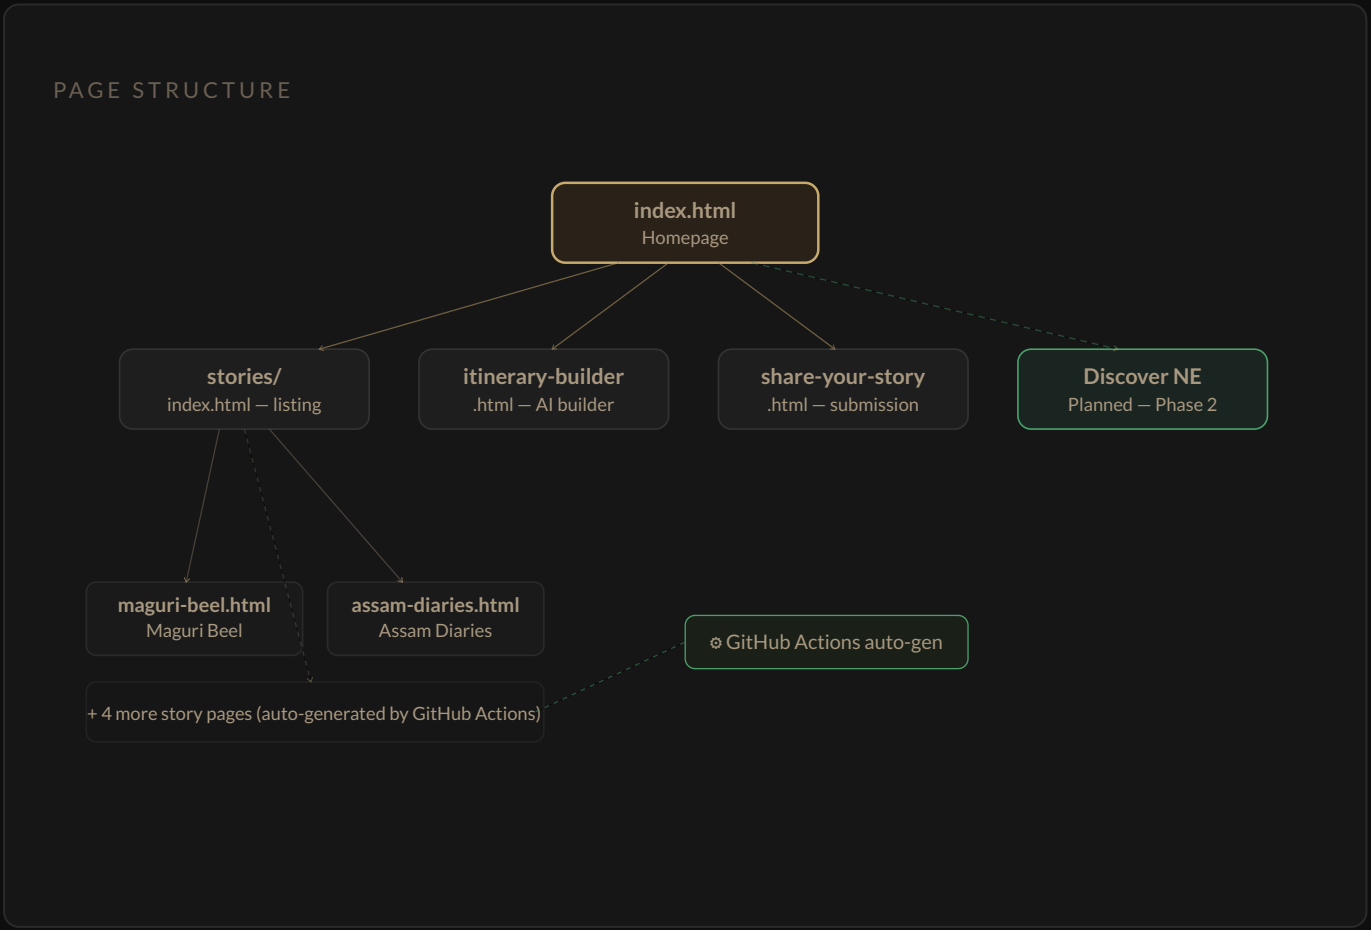
## WHAT'S BUILT

| FEATURE | DETAILS | STATUS |
|---|---|---|
| Homepage | Full dark hero, 9-image carousel, yellow ticker, What is Incitetales, Bridge CTA, newsletter | ✓ Live |
| Editorial Stories | Maguri Beel (Tinsukia) + Anini-Roing (Upper Dibang Valley) — long-form, personal, verified | ✓ Live |
| Stories Listing Page | Magazine layout, Editorial tab (state cards) + Field Stories tab (Supabase-powered, dynamic) | ✓ Live |
| Share Your Story | Submission form → Groq polish + extract → before/after confirmation → Supabase save → GitHub Actions page gen | ✓ Live |
| AI Itinerary Builder | Idea parser, intent detection, InsightEngine scope match, Groq generation, result page, email delivery | ✓ Live |
| InsightEngine v3.0 | Unified brain — 16 JSON entries (8 insights + 8 Arunachal districts) + Supabase insights table. Smart extractor, AI-only flag, geographic guard | ✓ Live |
| Supabase Database | stories table (field submissions) + insights table (AI-extracted place data). RLS policies, public read/insert | ✓ Live |
| GitHub Actions Runner | repository_dispatch trigger → fetch story from Supabase → generate HTML → commit + push → Pages deploys | ✓ Live |
| Cloudflare Worker v2 | Handles itinerary generation, story polish + extract, story publish, Supabase save, GitHub dispatch | ✓ Live |

| | | |
|---|---|---|
| GA4 Analytics | G-43DB1SDT7Z — installed across all pages. Page views, scrolls, outbound clicks tracked. | ✓ Live |
| Mobile CSS | Shared css/mobile.css across all 9 pages — single file fix | ✓ Live |
| Arunachal Destination DB | 8 districts — West Kameng, Tawang, Ziro, Mechuka, Dibang Valley, Changlang, East Siang, Lohit/Namsai | ✓ Live |
| Why Incitetales page | Separate page at /why-incitetales/ | ⏳ Building |
| Mobile navigation | Hamburger menu for all pages | ⏳ Building |
| MASI ID application | All text drafted, innovation note ready — submission pending | ⏳ Pending |

# Site Architecture

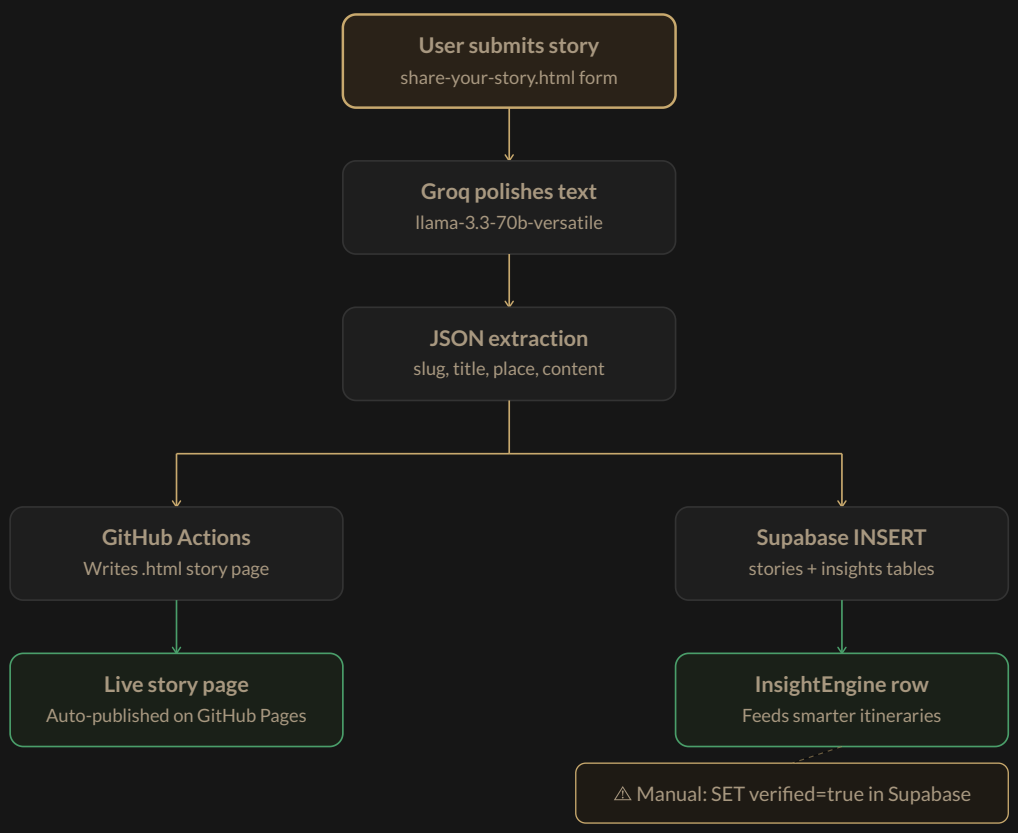
Incitetales runs on a deliberately lean architecture — static HTML on GitHub Pages, no framework, no build step. Every page is hand-authored, every CSS class is intentional, every line of JS earns its place. The stack was chosen to stay under ₹1,000/month forever, deploy in seconds, and never go down because a dependency broke. The intelligence lives in the data — not the infrastructure.



# Story Submission Pipeline

The pipeline transforms a raw user story submission into a published HTML page and a structured insight row in Supabase — fully automated once triggered.

END-TO-END STORY PIPELINE



## INSIGHTS TABLE SCHEMA

```
Table: insights
──────────────────────────────────────────────────────
id               uuid       primary key
story_id         uuid       FK → stories.id
story_slug       text       e.g. "assam-diaries"
geographic_scope text[]     ["Jorhat", "Assam", "Majuli"]
verified_facts   text[]     ["Jorhat has lush tea gardens", ...]
local_tips       text[]     ["immerse in cultural experiences", ...]
warnings         text[]     [] currently empty
stays            text[]     [] currently empty
routes           text[]     [] currently empty
```

```
season_notes     text        null currently
hidden_score     integer     0-10 quality signal
verified         boolean     false → must flip manually
created_at       timestamptz auto
```

---

# Itinerary Builder — User Flow

A 5-step form on `itinerary-builder.html` that collects trip preferences, sends them to the Cloudflare Worker, and returns a personalised itinerary + optional email delivery.

5-STEP FORM FLOW

### COVERED DESTINATIONS

| REGION | DESTINATIONS | PERMIT NOTE |
|---|---|---|
| Assam | Majuli, Jorhat, Kaziranga, Guwahati, Manas, Dibru-Saikhowa, Maguri Beel | None required |
| Meghalaya | Shillong, Cherrapunji, Dawki, Mawlynnong | None required |
| Mizoram | Aizawl, Phawngpui | ILP for non-NE Indians |
| Arunachal | Dibang Valley, Kameng, Mechuka, Lohit, Tawang | ILP (Indian) / RAP+PAP (Foreign) — per-district intelligence built in |
| Nagaland | Dimapur, Kohima, Dzukou Valley | ILP for non-NE Indians |
| Sikkim | Gangtok, Gurudongmar, North Sikkim | PAP for restricted areas |

---

# InsightEngine v3.0

The flywheel at the heart of Incitetales. Every story submitted improves the itinerary builder — automatically, with no manual curation beyond verifying rows.

## MATCHING LOGIC

```
// Fuzzy destination match — case-insensitive substring
function destinationMatches(scopeArray, destination) {
  const dest = destination.toLowerCase().trim();
  const tokens = dest.split(/[\s,]+/).filter(t => t.length > 2);

  return scopeArray.some(scope => {
    const s = scope.toLowerCase().trim();
    if (s.includes(dest) || dest.includes(s)) return true;
    return tokens.some(token => s.includes(token) || token.includes(s));
  });
}

// Filter: verified=true only, top 5 by hidden_score
const matched = allInsights
  .filter(row => destinationMatches(row.geographic_scope, destination))
  .sort((a, b) => (b.hidden_score || 0) - (a.hidden_score || 0))
  .slice(0, 5);
```

WHAT'S INJECTED INTO GROQ

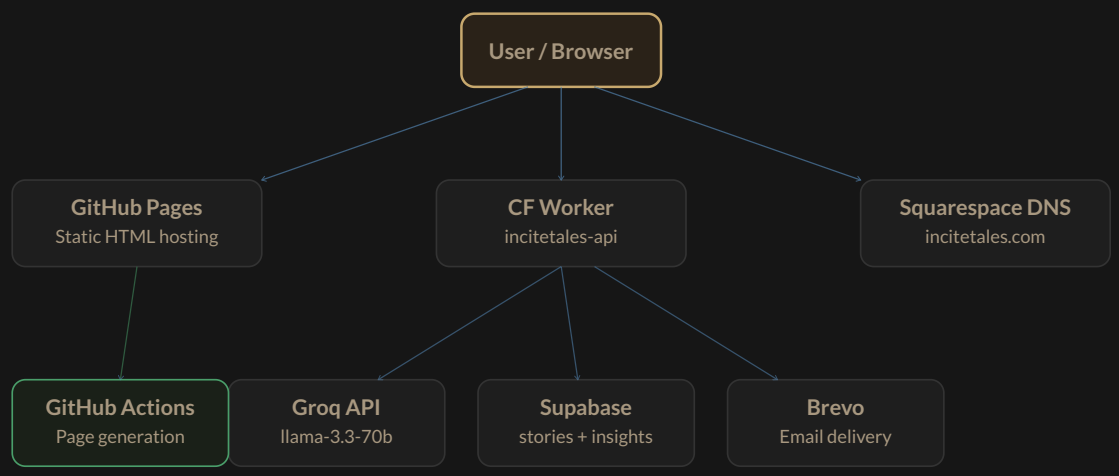
```
## Traveller Insights (sourced from verified community stories)
Use these real, on-the-ground insights to enrich the itinerary.
Weave them in naturally — don't list them verbatim.

### Insight 1 (Quality score: 7/10)
Verified facts: Jorhat has lush tea gardens | Majuli is a river island nearby | ...
Local tips: immerse in cultural experiences | explore authentic local adventures
Warnings: (empty)
```

---

# Infrastructure Map

FULL INFRASTRUCTURE



---

# Environment Variables

All secrets live in **Cloudflare Workers → incitetales-api → Settings → Variables and Secrets**. Never in source code.

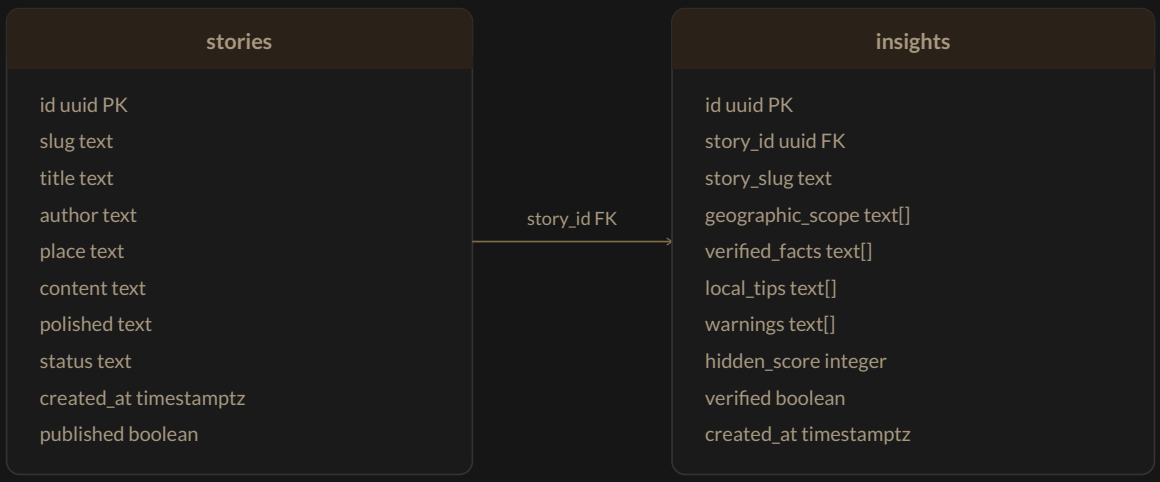
| | |
|---|---|
| `GROQ_API_KEY` | Groq API key — llama-3.3-70b-versatile inference |

| | |
|---|---|
| `BREVO_API_KEY` | Brevo SMTP API key — email delivery from [email protected] |
| `SUPABASE_URL` | Supabase project URL — https://xxxx.supabase.co |
| `SUPABASE_ANON_KEY` | Supabase anon/public key — read access to insights table |
| `GITHUB_TOKEN` | GitHub PAT token — triggers GitHub Actions story page generation |
| `GITHUB_REPO` | ivanrion07/Incite-Tales — target repo for story page commits |

# Database Schema

Supabase (Postgres). Two tables: `stories` (raw submissions) and `insights` (extracted intelligence).

SUPABASE SCHEMA — STORIES + INSIGHTS



### KEY SUPABASE QUERIES TO KNOW

```
-- Verify a story's insights after QA
UPDATE insights SET verified = true WHERE story_slug = 'your-story-slug';

-- Add a correction to verified_facts
UPDATE insights
SET verified_facts = array_append(verified_facts, 'Your correction here')
WHERE story_slug = 'your-story-slug';

-- See all unverified insights
SELECT story_slug, hidden_score, created_at
```

```
FROM insights WHERE verified = false ORDER BY created_at DESC;

-- See what InsightEngine would return for a destination
SELECT story_slug, geographic_scope, hidden_score
FROM insights WHERE verified = true ORDER BY hidden_score DESC;
```

# Phase Roadmap

4-PHASE LAUNCH ROADMAP

**PHASE 1**
**Content Sprint**
Mar–Apr 2026
MASI submission
Web platform live
✓ IN PROGRESS

→

**PHASE 2**
**Flutter App**
Apr–Jul 2026
MASI ID arrives
Idea2POC grant apply
Flutter build starts

→

**PHASE 3**
**App Launch**
Aug–Sep 2026
Flutter app live
Operator onboarding
Homestays · cabs · guides

→

**PHASE 4**
**Intelligence Scale**
2027
NE India knowledge API
State tourism integration
Most trusted NE platform

## PLANNED AI AGENTS

| AGENT | STATUS | DESCRIPTION |
|---|---|---|
| Itinerary Builder | Live | 5-step form → Groq → email. InsightEngine v3.0 active. |
| Story Extraction Agent | Live | Groq extracts place data from stories → Supabase insights table → powers itinerary builder |
| Operator Subscription Bot | Phase 2 | Onboard local operators (homestays, cabs, guides) via WhatsApp trigger |
| Permit Intelligence Agent | Phase 3 | Real-time Arunachal + Nagaland + Sikkim permit requirements per district |

# MASI / Grant Strategy

**One-line pitch for MASI Idea2POC**

*"Incitetales is Northeast India's first community-powered travel intelligence platform — where traveller stories directly improve AI-generated itineraries, built from Guwahati for the world."*

### MASI IDEA2POC — WHAT YOU NEED TO APPLY

| ITEM | STATUS |
|---|---|
| Udyam Registration (MSME) | ✓ Done |
| MASI application submitted at startup.assam.gov.in | ⏳ Pending — deadline Apr 20 |
| Innovation Note document | ✓ Done — ready to upload |
| All application text drafted (USP, problem, scalability, business model) | ✓ Done — ready to paste |
| Live product URL (proof of concept) | incitetales.com |
| Bank account for disbursement | To confirm |

### GRANT VALUE

Idea2POC: **₹5 lakh** one-time disbursement. Use of funds: field research travel across NE states (₹80K–1.2L), photography and visual content (₹40K–60K), content development — 20+ stories (₹60K–80K), marketing and user acquisition (₹80K–1L), legal and compliance (₹20K–30K), tech upgrades — better AI tier, analytics (₹40K–60K). Current infra cost: under ₹1,000/month — the grant goes toward fieldwork, not server bills.

### WHY YOUR APPLICATION IS STRONG

Most applicants come with a pitch deck. You have: a live website, working AI feature (InsightEngine v3.0), Supabase backend with real data, automated GitHub Actions pipeline, GA4 tracking, and email delivery. That's a working product, not an idea.

---

# Daily Operations

### MORNING (15 MIN)

| | |
|---|---|
| Instagram DMs + comments | Reply as brand voice |
| [email protected] | Itinerary requests, story submissions |
| GA4 quick check | Any traffic spikes worth noting |

### EVENING (20 MIN)

| | |
|---|---|
| New stories via pipeline? | Review insights row in Supabase |
| If yes → verify | `UPDATE insights SET verified=true WHERE story_slug='...'` |
| Content sprint day? | Push one piece of content |

### WEEKLY (SUNDAY, 30 MIN)

| | |
|---|---|
| GA4 review | Which story pages are getting traction |
| Brevo check | Any itinerary emails bouncing |
| CF Worker logs | InsightEngine errors |
| Supabase | Unverified insights piling up |

### AS-NEEDED

| | |
|---|---|
| New story written | Publish → GitHub Actions auto-generates → verify insights row |
| New destination added | Test a POST to Worker for that destination |
| Operator outreach | Reach out to local homestays, boat operators, local guides in Assam/Arunachal to onboard as verified operators |
